Quick Installation Guide

# Quick Installation Guide

## **Intel LGA775 / LGA1156 Backplate and screws mounting**

1. Place the correct backplate (LGA775 or LGA1156) under the motherboard in line with the four mounting holes surrounding the CPU.
2. Place the cooler on the CPU aligning the spring-loaded screws with the backplate.
3. Secure the cooler by using a philips screwdriver to turn the screws in a clockwise direction. Fasten the screws in a crosswise manner.

To uninstall the cooler undo all four screws in an anticlockwise direction.
